

emed scientific meeting 2004

**Proceedings** 

Leeds, UK, Jul. 29 - Aug. 1, 2004

# **Organising Committe**

Dr James Woodburn and Deborah Turner, Academic Unit of Musculoskeletal Disease, University of Leeds.

Telephone: 44 (0) 113 343 4938 Fax: 44 (0) 113 244 5533

e-mail: j.woodburn@leeds.ac.uk

# **Scientific Committe**

Dr James Woodburn MRC Clinician Scientist Fellow University of Leeds Academic Unit of Musculoskeletal Disease

Dr Philip Helliwell Senior Lecturer in Rheumatology University of Leeds Academic Unit of Musculoskeletal Disease

Dr Roger Soames Senior Lecturer University of Leeds School of Biomedical Sciences

Dr Neil Messenger Senior Lecturer University of Leeds ULISES (University of Leeds Institute for Sport and Exercise)

Dr Nick Harris Consultant Orthopaedic Surgeon General Infirmary at Leeds Specialist Foot and Ankle Surgeon

# **ESM 2004**

# Program

### Thursday 29th, July, 2004

#### Welcome to ESM2004

18:00 - 21:00	Registration
18:30 - 21:00	Buffet and Wine Reception (Piano by Matthew Whitham) Welcome address: Jim Woodburn (Foot pressure distribution measurement in Leeds: work in progress in the field of rheumatology)
18:30 - 20:30	novel (GmbH) Workshops: Workshop I Hardware (emed recorder, pedar-x, pliance-x, sensors) Workshop II Software (Databases, Projects, Reports, Clinics, Diabetes software)

Friday 30th, July, 2004

X

		Biomechanics I Jurn, University of Leeds, UK
7:3	0 - 8:30	Registration
8:30	0 - 9:15	Keynote Lecture, a personal perspective on past, current and future use of foot pressure measurement Klenerman L
9:18	5 - 9:30	Using pressure distribution technology for evaluating foot function in tod- dlers <i>Hallemans A, de Clercq D, Aerts P.</i>
9:30	) - 9:45	Do ankle foot orthoses improve force and pressure distribution during standing in children with hemiplegia? Hunt A, O' Reilly T, Megy M, Bronwyn T
9:45	5 - 10:00	Changes in foot geometry parameters in 30 infants during the first three years of independent walking Bosch K, Rosenbaum D
10:0	00 - 10:15	Between-day reliability of repeated plantar pressure distribution measurements in a normal population Rosenbaum D, Kersting U
10:1	5 - 10:45	Coffee break

# **ESM 2004**

# Program

#### Friday 30th, July, 2004 cont.

#### Session 5 Posters

16:30 - 17:30 Dv

Dynamic pedography in patients with diabetic polyneuropathy after orthopaedics surgery of the lower extremity

Biomechanical abnormalities in patients with high risk of foot ulcer

- Biomechanical abnormalities in patients with high risk of foot ulcer or amputations Tsvetkova TL, Kushnir AN, Biegovsky VB, Kruchkova ZV
- Remote pressure distribution measurement data analysis and data collection: telemedicine project

  \*\*Voltage AM\*\* Spitz P. Tevertegue TV. Fritage C. Laborage AW\*\*
- Prevention of plantar foot traumas in weight-lifting practice

  Macellan V, Varala C, Giacomozzi C
- Plantar orthoses: Towards a better design to improve their effectiveness in diabetic ulcer prevention Giacomozzi C, D'Ambrogi E, Uccioli I, Macellan V
- Changes of foot load and functional characteristics in the group of obese children during reduction of weight Kostelnikova L, Hlavacek P
- Hight normalisation techniques improve the correctness of plantar pressure measurements? Giacomozzi C. Macellari V
- Foot function and morphology in different diabetic populations in New Zealand Kersting UG, Aitken K, Gumey J, Martin S, Rosenbaum D

#### Posters of current work from the host institute

- Multi-segment foot motion during gait: proof of concept in rheumatoid arthritis

  Wheelth as A Newson KM Laborator Siegel K. Kepple TM. Gerber LH
- Off-loading the painful forefoot in rheumatoid arthritis is characterised by changes to the regional velocity of the centre of pressure
- Debridement Of Plantar Callosities In Rheumatoid Arthritis: A Randomised Controlled Trial Davys HJ, Turner DE, Helliwell PS, Conaghan PG. Emery P, Woodburn J
- Off-the-shelf contoured orthoses demonstrate comparable mechanical properties to custom-made foot orthoses at less cost

  Redmond A, Landorf K, Keenan AM, Emery P

18:15 ~ 21:00 Reception at Thackray Medical Museum : a wine and buffet reception provided, including gallery tour

# ESM 2004

## Saturday 31th, July, 2004

Activity day

7:00 - 21:00

Getting to know each other with lots of fun outdoors hiking, biking, communicating, and celebrating

Sunday 1st August, 2004

Session 1 Foot deformities and other pathologies
Chair Adrienne Hunt, The University of Sydney, Australia (gett les an fanillampeuten todad research)

8:30 - 9:15

Keynote Lecture

The art of using foot pressure systems as a clinical tool

Abboud R, Department of Orthopaedic & Trauma Surgery, University of Dundee, UK

9:15 - 9:30

Sagittal thickness of the plantar fascia is related to static arch shape and regional loading of the foot in plantar fasciitis

Wearing SC, Smeathers JE, Yates B, Sullivan PM, Uriv SR, Dubois F

9:30 - 9:45 + +

How to evaluate a result in conservative flatfoot surgery with dynamic pedobarography analysis? *Toullec E* 

9:45 - 10:00 <del>+</del>

Detecting the presence of functional hallux limitus using dynamic foot pressure *Yizhar SKZ, Khamis S* 

10:00 - 10:15

Changes in the plantar pressure patterns after correction of hallux valgus deformity with the scarf osteotomy Love TJ. Rosenburg C. Klaner H. Kinast C.

10:15 - 10:3**0** 

The impact of exercising on school children with valgus heel and flatfeet

Coffee break

## Session 2 Biomechanics II

Chair: Sharon Dixon, University of Exeter, UK

11:00 - 11:15

The problem of footwear for women in the final term of pregnancy

11:15 - 11:30 🔟

Dynamic calibration and frequency response of capacitive film printed transducers *Paone N, Scalise L* 

11:30 - 11:45

Accuracy of sensors and electronics with pedar-x insole measurements

11:45 - 12:00

Biomechanical Assessment of the structure and function of Birkenstock footbed technologies

Brow LE, Hilletrom H.T. Kim EH, Heilman RP Sonu

12:00 - 12:15

Casting methods and plantar pressure: The effects of custom made foot orthoses on plantar pressure distribution

Guirlemond N. Leffers P. Sanders A. Schaper N. Walenkamp C

12:15 - 13:30

Lunch break

# ESM 2004 Program

## Sunday 1st August, 2004

56	250	ion	3	Sn	orts
200		1101			10163

Chair Mario Lafortune, Nike, Beaverton, Oregon, USA

13:30 - 14:15 ++	Keynote Lecture, Pressure distribution measurement at the University Hospital Muenster: past, present and future uses Rosenbaum D, University Hospital Muenster, Germany
14:15 - 14:30	Plantar pressures and foot geometry in athletes of different ethnicity Kersting UG, Gumey J, Rosenbaum D
14:30 - 14:45	Temporal characteristic of foot rollover during barefoot jogging: Reference data for young adults <i>de Cock A, de Clercq D Willems T, Viturouw E</i>
14:45 - 15:00	Relationship between gait biomechanics and exercise-induced lower leg pain: a prospective study on risk factors Willems T. Witvrouw E. Cock AD, de Clercq D
15:00 - 15:15	Changes in plantar surface area under different loading conditions Vicenzino B, McPoil TG, Cornwall MW
15:15 - 15:30	Application of centre of pressure to indicate rearfoot inversion-eversion in a simulated shoe shop setting Dixon SJ
15:30 - 16:00	Coffee break

#### Session 4 Pressure technology applications

Chair: Scott Wearing, University of Queensland, Australia

16:00 - 16:15	Clinical proficiency of Dutch podiatrists, pedorthists and orthotists regarding plantar pressure reduction  Guldemond N, Leffers P, Sanders A, Schaper A, Walenkamp G
16:15 - 16:30	Validity of the pedar mobile system of vertical force measurement during a long-term period Hurkmans HLP, Bussmann JPG, Selles RW, Horemans HLD, Benda E, Stam HJ, Verhaar JAN
16:30 - 16:45	Evaluation of a capacitive pressure sensor for joint contact stress measurements <i>Martinelli L, Rosenbaum D, D'Alessio T</i>
16:45 - 17:00	Publicity of pressure distribution Spodrina I, Krumins M, Vetra A
17:00	Closing remarks Woodburn J, Seitz P

# CASTING METHODS AND PLANTAR PRESSURE 'THE EFFECTS OF CUSTOM MADE FOOT ORTHOSES ON PLANTAR PRESSURE DISTRIBUTION'

Nick Guldemond (1a), Pieter Leffers (2), Antal Sanders (1b), Hans Emmen (1b), Nicolaas Schaper (1c), Geert Walenkamp (1a)

- a) Orthopaedic Surgery, b) Rehabilitation Medicine, c) Internal Medicine. University Hospital Maastricht, The Netherlands
- 2. Fac. Medicine, Dept. Epidemiology, Maastricht University, The Netherlands

#### **BACKGROUND**

Custom-made foot orthoses are widely used to treat various problems of the feet. No publications regarding differences in plantar pressure distribution resulting from different casting methods for the construction of custom-made foot orthoses have been found.

#### **METHODS**

Four casting methods were used for construction of accommodative and functional orthoses for the feet of ten healthy women. Two foam box techniques were used: A) accommodative full weight bearing method; B) functional semi-weight bearing subtalar joint neutral-position method. Also two suspension plaster casting techniques were used: C) accommodative casting: D) functional subtalar joint neutral position (Root) method. Their effect on contact area, plantar pressure and walking convenience was evaluated on a treadmill in standard shoes with the Novel Pedar Insole-system®. For each orthosis 45 steps were used to estimate contact area and peak pressures. Walking convenience was scored on a ten-point scale.

#### RESULTS

Compared to shoes without orthosis, all orthoses increased the total contact area, mean:  $21.5~\text{cm}^2$  (17.4%). The mean increase in the medial mid foot region was  $12.9~\text{cm}^2$ . Differences in contact areas between orthoses, for total plantar surface and medial mid foot, were statistically significant (p  $\leq$  .015), except between orthoses A-B and A-C (p  $\geq$  .057).

Peak pressures for the total plantar surface with orthoses were lower than without orthoses, mean: -7.3 N/cm2 (22.8%). Among orthoses, only the difference between orthoses A and B was statistically significant (p = .008). Differences between orthoses for the fore foot were small ( $\leq 1.0 \text{ N/cm}^2$ ) and none of them were statistically significant (p  $\geq$  .083): figure 1. All orthoses increased peak pressures in the toe regions.

All orthoses produced shorter gait lines compared to the shoe without insole (figure 2). The gait lines of the shoe without insole and accommodative orthoses are more medially located compared to functional orthoses.

Walking convenience in the shoe was better rated than with orthoses (p  $\leq$  0.05). There were no differences in appreciation of walking convenience between orthoses A, B and C (p  $\geq$  0.20). Orthoses D had the lowest appreciation (p  $\leq$  0.004).

#### CONCLUSIONS

The four casting methods resulted in differences between orthoses with respect to contact areas but only slight differences in peak pressures. In comparison with plaster casting, foam box techniques lead to accommodative and functional orthoses with similar plantar pressure patterns and better walking convenience.
